

## **CARE INSTRUCTIONS**

### ***Breast Forms***

*Care for your breast form should be part of your normal personal hygiene routine. Clean regularly with a mild liquid cleanser using warm water, rinse with water and pat dry with a soft towel. Never wring, rub, use abrasive cleaners, acetone, alcohol or any other solvent on your breast form as these may damage the form.*

*Body lotion, talcum powder and natural body oils may cause a film to build up on the back of your breast form. Pointed or sharp objects like pins, pet claws, nail files, scissors, etc., may damage it. Chlorinated or salt water will not harm your breast form. Also, any discoloration of the breast form does not affect the quality or function in any way.*

### ***Bras***

*Bras should be hand washed or machine washed on gentle cycle. No bleach. If machine washing, the use of a laundry/lingerie bag is recommended. Bras should be line dried. No ironing.*
